TORONTO CALL:

Applying Education in a Complex World.

Complexity theory, complex systems, complex strategies and a complex world. The idea that education is in flux and that it prepares students from a changing workplace is well embedded. It guides our

teaching in multiple ways. This conference reflects on the changing world of teaching, teaching practice and the workplace we prepare students for.

VIRTUAL CALL (USA | UK | UAE):

Transformative Teaching.

As we move out of the pandemic mode of teaching, this conference asks us to once again highlight the multifaceted nature of our teaching. It turns our focus to how we teach; how students learn; and how we engage beyond the academy walls. It welcomes varied themes: skills building, creative exploration, personal development, critical thinking, external engagement, post education employment, and more.
